POINTS OF CAUTION

■ GENERAL PRECAUTIONS

- Before you remove the unit or mount it, turn off the power supply and output signal for safety.
- DO NOT set the switches on the module while the power is supplied. The switches are used only for maintenance without the power.

ENVIRONMENT

- Indoor use.
- When heavy dust or metal particles are present in the air, install the unit inside proper housing with sufficient ventilation.
- Do not install the unit where it is subjected to continuous vibration. Do not subject the unit to physical impact.
- Environmental temperature must be within -10 to $+55^{\circ}$ C (14 to 131° F) with relative humidity within 30 to 90% RH in order to ensure adequate life span and operation.

■ WIRING

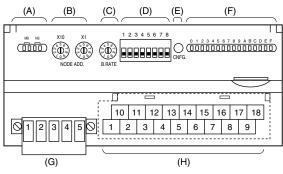

- Do not install cables close to noise sources (relay drive cable, high frequency line, etc.).
- Do not bind these cables together with those in which noises are present. Do not install them in the same duct.

■ AND

• The unit is designed to function as soon as power is supplied, however, a warm up for 10 minutes is required for satisfying complete performance described in the data sheet.

■ NODE ADDRESS

Node Address is selected between 1 and 63 in decimal. The left switch determines the tenth place digit, while the right switch does the ones place digit of the address.

BAUD RATE

Baud Rate is selected with the rotary switch.

 $\begin{array}{c} \left(\begin{array}{c} 5 & 5 \\ 0 \\ 0 \\ 0 \end{array} \right)^{\left(\begin{array}{c} 5 \end{array} \right)^{\left(\begin{array}{c} 5 \\ 0 \end{array} \right)^{\left(\begin{array}{c} 5 \end{array} \right)}} \left)^{\left(\begin{array}{c} 5 \end{array} \right)^{\left(\begin{array}{c} 5 \end{array} \right)}} \left)^{\left(\begin{array}{c} 5 \end{array} \right)}} \left)^{\left(\begin{array}{c} 5 \end{array} \right)^{\left(\begin{array}{c} 5 \end{array} \right)}} \left)^{\left(\begin{array}{c} 5 \end{array} \right)} \left)^{\left(\begin{array}{c} 5 \end{array} \right)}} \left)^{\left(\begin{array}{c} 5$

Baud Rate Setting

The R7D communicates in the baud rate setting detected at the startup with the switch set to the positions 0 (125 kbps), 1 (250 kbps) or 2 (500 kbps).

For the settings 3 through 9, it analyzes the PLC's network to determine the baud rate on the network.

INPUT OUTPUT DATA BIT & DATA ALLOCATION

Output data length can be set with the front DIP switch. Input data length is regardless of output data length, feedback inputs 1 to 8 are assigned to bit 0 to 7.

Input ON: 1, Input OFF: 0

OUTPUT DATA BIT: 16 BITS (SW1-3: OFF)

When output data bit is 16 bits, set each output with 2 bits. The table below shows data allocation.

BIT	SETTING	OPERATION
	0,0	No operation
	1,0	Output 1 ON
0, 1	0, 1	Output 1 OFF
	1, 1	Output 1 RESET
	0,0	No operation
	1,0	Output 2 ON
2, 3	0, 1	Output 2 OFF
	1, 1	Output 2 RESET

OUTPUT DATA BIT: 8 BITS (SW1-3: ON)

When output data bit is 8 bits, set each output with 1 bit. The table below shows data allocation.

BIT	SETTING	OPERATION
0	0	Output 1 OFF
0	1	Output 1 ON

15		Unused

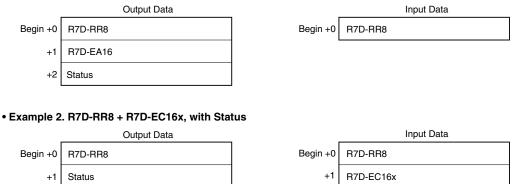

ON (or OFF) cannot be set consecutively, because when each bit is "1", ON is set and when each bit is "0", OFF is set.

By setting with 2 bits, the module operates as shown above. ON or OFF can be set consecutively. To output ON twice successively, set ON (1, 0), RESET (1, 1), and then set ON (1, 0) again.

DATA ALLOCATION

'Begin' address is determined by the R7D's node address and the master setting.
